EDUCATION

Bachelor's Degree in Computer Science
Appalachian State University, Boone, NC — May 2012

EXPERIENCE

Champ Studio Portland, OR — November 2015 - Present
Lead Web Developer
- Collaboration on Champ Studio logo and brand design, creation of logo in SVG format, integration of logo into WordPress as a plugin with animation and color options.
- Server deployment using DigitalOcean, DNS and MX domain configuration.
- WordPress install and sub theme customization for all client projects.
- Launch of Portland Law Design to help capture leads/sales in the law industry.

The Wired Mouse Asheville, NC — August 2012 - September 2015
Web Developer
- Helped clients build a wide range of sites in Moodle, WordPress, Joomla, and Drupal, with a core focus on full stack Drupal 7 development.
- Designed and converted .psd theme files to Drupal 7 theme system using Omega, LESS/SASS, jQuery, and responsive grid frameworks.
- Built headless Drupal 7 site using RESTful services for iOS app authentication and data management.
- Debugged issues for clients with handwritten sites in Javascript and PHP.

Enetech LLC Boone, NC — February 2011 - April 2012
Programmer / Co-founder
- Developed Android application to log check-ins, update database information, authenticate and sync with ASP.NET site and database using REST API. Written as native Android app in Java.
- Created Moodle site for small school, contracted to maintain site as admin, server maintenance, and teacher training.
- Implemented HTML/CSS themes in WordPress and Drupal theme systems.

LightingSale.com Greensboro, NC — February 2009 - July 2010
Web Developer
- Fulfilled site-building tasks such as create new pages, design banner graphics, update menu items, and fix product image issues using existing CMS.
- Helped import, maintain, and export backups of large product database with 50,000+ specialty products.

PROJECTS

Rhino Networks

Drupal 7 ecommerce after-hours project with The Wired Mouse team.
- Developed module to add invoice feature to Drupal Commerce. Integrated to admin page to view, print, generate PDF, and send user invoice using Drupal email templates.
- Setup product import using Feeds and Commerce modules, created custom product feed for Google Merchant account.
- Created logo, custom product images, and banner/ad graphics.
- Managed successful Google AdWords campaign.

Cakes by Jane

WordPress ecommerce featured work project.
- Setup advanced multi-ship and county tax plugins, integrated with WooCommerce platform.
- Developed custom UPS World Ship export plugin with multi-ship integration using WooCommerce API and multi-ship plugin functions.

Game Programs

Game code for different platforms, languages, and APIs.
- Object-oriented game engine written in C++ using SDL API. Built with Eclipse on Ubuntu and deployed using gcc commands on Raspberry Pi.
- Unity games using 2D configuration and scripted in C#.
- State-based 2D game engine in Javascript using Phaser 2 API.
- Small single-file games written in Python using pygame API.
